

Sylvanus Augustus

Full-Stack Web Developer & Data Analyst

Port Harcourt, Nigeria | sylvanusuche2007@gmail.com | [Portfolio Website](#)

Profile Summary

Results-driven Full-Stack Web Developer and Data Analyst currently in my 400 level at university, graduating next year. Adept at building robust, modular web applications from database architecture to responsive user interfaces, alongside transforming messy raw data into actionable business decisions through advanced analytics. Passionate about leveraging AI and modern backend systems to solve real-world problems.

Technical Skills

Full-Stack Web Development

- **Frontend:** React, Next.js, Tailwind CSS, EJS
- **Backend:** Node.js, Express, NestJS, FastAPI
- **Databases:** PostgreSQL, MongoDB
- **DevOps & Tooling:** Docker, CI/CD pipelines, Git

Data Analytics

- **Languages & Libraries:** Python, pandas, R (tidymodels), SQL
 - **BI & Reporting:** Power BI, Advanced Excel (Financial Reporting & Modeling)
-

Featured Projects & Experience

AI Financial Reconciliation Platform

- Designed and built an automated bank statement and ledger reconciliation system, using a Python service with Google Gemini to extract data from multi-format financial records (PDF and Excel statements).
- Built a NestJS and PostgreSQL API layer that orchestrates the extraction pipeline and runs transaction-matching, ambiguity detection, and balance-proof logic, reducing manual auditing time.

Customer Churn Prediction System (R / Shiny)

- Built an interactive R Shiny dashboard that trains and compares four classifiers (logistic regression, decision tree, random forest, XGBoost) with the tidymodels framework to predict customer churn.
- Delivered a full evaluation and explainability suite (ROC/PR AUC, cross-validation, variable importance) so non-technical stakeholders can identify high-risk segments directly from the dashboard.

Vellum — Invoicing & Payments Platform (vellum-omega-five.vercel.app)

- Built and deployed a full-stack invoicing and payments platform for studios and freelancers, letting clients pay by card from a link with no account required, on a Next.js, NestJS, Prisma and PostgreSQL stack.
 - Integrated Stripe and Paystack for payment collection and Google Gemini for AI-assisted bill and receipt extraction with confidence scoring, backed by JWT/Argon2id auth and 40+ automated tests.
-

Education

- **Bachelor of Science (B.Sc.) in Computer Science** (400 Level / Senior Year)
Expected Graduation: Next Year
 - Relevant Coursework: Data Organization and Management, Software Engineering, Database Systems, Computer Science Innovation.
